

Katsuhiko Tani, Same as above

**Title:** Application of electrostatic layer-by-layer adsorption to textile dyeing

**Your abstract:** The layer-by-layer adsorption technique was employed for coloring textile fabrics. The assembling process of individual dye-polyion layers of copper-phthalocyanine dye Direct Blue 86 - poly (diallyldimethylammonium chloride) (PDDA) was performed on polyester fabrics. Dyed fabrics were discussed in terms of color depth K/S and colorfastness.
